## Echogenic Micro Laser Etched Needles (MLE™)

Havel's® Echogenic Micro Laser Etched (MLE™) AccuTarg® Quincke and AccuTarg® Chiba needles are making ultrasound-guided procedures easier, safer, and more effective. The MLE™ marks near

the tip provide multiple angled surfaces to reflect sound waves back to the transducer. This creates a bright reflection near the tip, which gives you clear confirmation of your needle's location. Havel's needles also have two small bevels on the back of the tip to reduce lateral deviation and insertion resistance, giving you smoother punctures and more control over needle placement. Call today for a free sample!

## Silver Rebate Program Highest paid silver rebate in years!

- We are professionals in archival X-ray film destruction.
- Why keep X-ray film longer than your legal liability? Ask us about retention laws.
- We can purge, move, shred, recycle, or store your records. We are experts in HIPAA and HITECH compliance.
- Save thousands in monthly rent by purging off-site records. Most of the time, we can cover all purge costs. Let us help lower your off-site costs.

# FERRALERT™

Kopp Development Inc, the world's leading manufacturer of ferromagnetic detectors for MRI safety, is proud to introduce the newest innovation, FerrAlert™ SOLO.

Designed for facilities with a large outpatient population, FerrAlert™ SOLO is the latest advancement in prescreening technology and is particularly attractive for budget-conscious facilities. FerrAlert™ SOLO is a highly sensitive ferromagnetic detector incorporating Kopp Development's unique, patented technology to detect and precisely locate offending ferrous objects anywhere on the body. FerrAlert™ detectors are the ONLY ferromagnetic detectors that identify the location of offending ferrous objects. This unique and timesaving feature makes them the preferred choice of hospitals and imaging centers worldwide.
